***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: that the process is not drawn to producing hexafluoropropylene oxide but to purifying hexafluoropropylene oxide.

Claims 17-20, 23 and 25-26 recites the limitation "purified" in line 1 thereof. There is insufficient antecedent basis for this limitation in the claim from which they depend. Insertion of the term purified into claim 1 will overcome this rejection.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lowell US 3,412,148.

Lowell teaches a process in which hexafluoropropylene oxide is treated with a drying agent. See column 2 lines 23-34. Lowell differs in that it does not teach using an adsorbent drying agent such as activated carbon or charcoal.

However, the use of adsorbents such as charcoal to remove moisture from propylene oxide compounds so as to reduce the undesired effects of the retained moisture, e.g. by-product formation, is well-known in the art. To apply this technique to other analogous propylene oxides to remove moisture along with its associated effects would have been obvious to one ordinary skill in the art as the results would not have been unexpected.

No claim is allowed.
